The nucleotide sequence of this BAC clone was generated by combining Monsanto and RGP-Japan sequencing data.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a "working draft' sequence.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents a portion of corn acid triacylglycerol lipase (TAGL), as deduced from the nucleotide sequence of an isolated contact and clone (see AA234955). Novel acid and neutral TAGL polypeptides CARA32301-17) and polynucleotides (see AA234950-66) from corn, catalpa, rice, soybean and wheat tissues are disclosed. The enzymes are used for detecting the enzymes in situ in cells or in vitro in are used for detecting the enzymes in situ in cells or in vitro in cell extracts. The polynucleotides may be used to create transgenic plants in which the TAGL levels are present at higher or lower levels than normal, or in cell types or developmental processes where they are cont normally found. This would alter the level of triacylglycerol and cholesteryl esters found in those cells. Accumulation of fatty acids with unusual structures may be desirable to eliminate expression of TAGL genes for certain applications. TAGL enzymes may also be useful for the processing of plant seed oils and for the development of novel seed design and/or identification of inhibitors of those enzymes that may be useful as herbicides. This is desirable because inhibition of the activity of either of the enzymes could lead to an inhibition of plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

This sequence represents the entire soybean acid triacylglycerol lipase (TAGL), as deduced from the nucleotide sequence of isolated CDNA clones (see AAZ34958). Novel acid and neutral TAGL polypeptides (see AAZ34301-17) and polynucleotides (see AAZ34950-66) from corn, Catalpa, rice, soybean and wheat tissues are disclosed. The enzymes may be prepared recombliantly and used to raise antibodies, which are used for detecting the enzymes in situ in cells or in vitro in cell extracts. The polynucleotides may be used to create transgenic plants in which the TAGL levels are present at higher or lower levels than normal, or in cell types or developmental processes where they are not normally found. This would alter the level of triacylglycerol and chosteryl esters found in those cells. Accumulation of fatty acids with unusual structures may be a positive phenotype in plants used for foods. In addition, it may be desirable to eliminate expression of TAGL genes for certain applications. TAGL enzymes may also be useful seed oils. The TAGL enzymes can also be used as targets to facilitate the useful as herbicides. This is desirable because inhibition of the activity of either of the enzymes could lead to an inhibition of plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel plant triacylglycerol lipase polynucleotides used to alter the level of the enzyme in transgenic plants \, -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8 QLYWNWSWDDLVVNDLPAMVDFVVKQTGQKPHYVGHSMGTLVALAAFSEGRVVSQLKSAA '67

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the entire soybean acid triacylglycerol lipase (TAGL), as deduced from the nuclectide sequence of isolated cond acid and neutral TAGL polypeptides (See AAZ34959). Novel acid and neutral TAGL polypeptides (See AAZ3301-17) and polynuclectides (See AAZ34950-66) from corn, catalpa, rice, soybean and wheat tissues are disclosed. The enzymes may be prepared recombinantly and used to raise antibodies, which are used for detecting the enzymes in situ in cells or in vitro in cell extracts. The polynuclectides may be used to create transgenic plants in which the TAGL levels are present at higher or lower levels than normal, or in cell types or developmental processes where they are not normally found. This would alter the level of triacylglycerol and choisesteryl esters found in those cells. Accumulation of fatty acids with unusual structures may be desirable to eliminate expression of TAGL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                      foods. In addition, it may be desirable to eliminate expression of plant seed oils and for the development of novel seed oils. The TAGL enzymes may also be useful for the processing of plant seed oils and for the development of novel seed oils. The TAGL enzymes can also be used as targets to facilitate the design and/or identification of inhibitors of those enzymes that may be useful as herbicides. This is desirable because inhibition of the activity of either of the enzymes could lead to an inhibition of plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              plant triacylglycerol lipase polynucleotides used to alter the of the enzyme in transgenic plants \, \cdot \,

This sequence represents a substantial portion of corn acid
triacylglycerol lipase (TAGL), as deduced from the nucleotide
sequence of a contig (see AA234953) assembled from isolated leaf and
shoot cDNA clones. Novel acid and neutral TAGL polypeptides (see
AA32301-17) and polynucleotides (see AA234950-66) from corn, Catalpa,
rice, soybean and wheat tissues are disclosed. The enzymes see
are used for detecting the enzymes in situ in cells or in vitro in
are used for detecting the enzymes in situ in cells or in vitro in
cell extracts. The polynucleotides may be used to create transgenic
plants in which the TAGL levels are present at higher or lower levels
than normal, or in cell types or developmental processes where they are
not normally found. This would alter the level of triacylalycerol and
cholesteryl esters found in those cells. Accumulation of fatty acids
with unusual structures may be desirable to eliminate expression of TAGL
genes for certain applications. TAGL enzymes may also be used for
foods. In addition, it may be desirable to eliminate expression of TAGL
genes for certain applications. TAGL enzymes may also be useful for the
processing of plant seed oils and for the development of novel seed
cills. The TAGL enzymes can also be used as targets to facilitate the
useful as herbicides. This is desirable because inhibition of the
activity of either of the enzymes could lead to an inhibition of plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 SSCTLRFQLYWNWSWDDLVVNDLPAMVDFVVKQTGQKPHYVGHSMGTLVALAAFSEGRVV 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents the entire rice acid triacylqlycerol lipase (TAGL), as deduced from the nucleotide sequence of an isolated contact Acidne (See AAZ34956). Novel acid and neutral TAGL polypeptides (See AAZ34950-66) from corn, contact and polynucleotides (see AAZ34950-66) from corn, catalpa, rice, soybean and wheat tissues are disclosed. The enzymes may be prepared recombinantly and used to raise antibodies, which may be prepared recombinantly and used to raise antibodies, which care used for detecting the enzymes in situ in cells or in vitro in cell extracts. The polynucleotides may be used to create transgenic plants in which the TAGL levels are present at higher or lower levels than normal, or in cell types or developmental processes where they are not normally found. This would alter the level of triacylglycerol and choicesteryl esters found in those cells. Accumulation of fatty acids with unusual structures may be a positive phenotype in plants used for foods. In addition, it may be desirable to eliminate expression of TAGL genes for certain applications. TAGL enzymes may also be used as targets to facilitate the processing of plant seed oils and for the development of novel seed oils. TAGL enzymes may also be useful as herbicides. This is desirable because inhibition of the activity of either of the enzymes could lead to an inhibition of plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

RGL, opt. used with other lipases, are useful therapeutically (1) to facilitate absorption of ingested fats in patients deficient in endogenous gastic lipase and (2) to treat disorders caused by inadequate lipase prodn. esp. mucoviscidiosis or pancreatic exocrine deficiency. It can also be used (partic. when immobilised) for enzymatic bioconversion, e.g. hydrolysis or transesterification.
                                                                                 Rabbit gastric lipase, its precursor and their DNA - useful for treating conditions linked to gastric lipase deficiency, such as mucoviscidiosis and pancreatic exocrine insufficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New precursor polypeptide of defined sequence - and corresp. DNA used to transform hosts for prodn. of the polypeptide

                                                                                                                                                                                                                                                                                    is
                                                                                                                                                                                                                                                                                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                  New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                              10 YWNWSWDDLVVNDLPAMVDFVVKQTGQKP-HYVGHSMGTLVALAAFSEG-RVVSQLKSAA 67
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The inventors claim a pregastric lipase protein and a gene encoding
it. Gastric lipase protein is useful for oral administration to
treat lipase deficiency, e.g. cystic fibrosis or pancreatitis.
                                          The inventors claim a DNA sequence encoding AAP60723 linked to a promoter upstream and a gene for a polypeptide downstream. Particular examples are the yeast emzyme AM6, the mammalian enzyme, gastric lipase and the mammalian lymphokine, interferon-alpha2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New gastric lipase protein, esp. of human origin – for treating lipase deficiency, and DNA sequences coding for it
                                                                                                                                                                                    5;

This is the amino acid sequence of the human pre-duodenal (i.e. gastric)

lipase enzyme. The sequence can be used to generate transgenic plants

producing recombinant lipase in an enzymatically acitive form.

Alternatively amino acids 20-73 or 20-73 (1-4 or 1-54 of the mature

protein, respectively) can be deleted to form the derivatives designated

delta-4 or delta-54 respectively. Plants, or their extracts, expressing

the lipases or the truncated derivatives, can be used:

(a) as pharmaceuticals or food to facilitate absorption of fat, either

in healthy subjects or in patients with inadequate levels of

abstrict/pancreatic lipase e.g. those with cystic fibrosis or exocrine

pancreatic insufficient, in the elderly or in patients undergoing medical

treatment which alters fat adsorption; (b) for performing industrial or

agricultural reactions, e.g. in processing of fats or in the dalry

industry, for hydrolysis or transesterification reactions, etc., where

the plant material may provide both enzyme and substrate. The transgenic

plants can also be used for biofuel production.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to TANGO or INTERCEPT proteins and coding sequences (see AAF4512-F45136 and AAF45138-F45139 and AAB66031-B66057, AAB66064-B66083 and AAB66085). The TANGO/INTERCEPT proteins and coding sequences are useful for the treatment of neurological disorders such as central nervous system (CNS) disorders. CNS-related disorders such as central nervous system (CNS) disorders. The CNS disorders include neurological and cerebrovascular disorders. The CNS disorders include Alzheimer's disease, senile dementia, Huntington's disease, amyotrophic lateral sclerosis, parkinson's, Gillse de la Tourette's syndrome, autonomic function disorders such as hypertension and sleep disorders, neuropsychiatric disorders psychoactive substance use disorders, and bipolar affective disorder. The present sequence is a sequence used in a sequence homology alignment with the TANGO/INTERCEPT.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Qγ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         lipase enzyme. The sequence can be used to generate transpend plants producing recombinant lipase in an enzymatically active form.

Alternatively the first 4 or 54 amino acids of this sequence can be deleted to form the derivatives designated delta-4 or delta-54 respectively. Plants, or their extracts, expressing the lipases or the truncated derivatives, can be used: (a) as pharmaccuticals or food to facilitate absorption of fat, either in healthy subjects or in patients with inadequate levels of gastric/pencreatic lipase e.g. those with cystic fibrosis or exorcine pencreatic insufficient, in the elderly or in treatment which alters fat adsorption; (b) for performing industrial or agricultural reactions, e.g. in processing of fats or in the dairy industry, for Mydrlysis or transseterification reactions, etc., where the plant material may provide both enzyme and substrate. The transgenic plants can also be used for biofuel production.
                                                                                                                                                                                                                                                                                   Dog; duodenal; gastric; lipase; transgenic; plant; recombinant; extract; food; absorption; fat; pancreatic; cystic fibrosis; exocrine; dairy; hydrolysis; trans-esterification; substrate; enzyme; biofuel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This is the amino acid sequence of the dog pre-duodenal (i.e. gastric)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recombinant human or canine pre-duodenal lipase prodn. in transgenic plants - useful for facilitating absorption of fat, as bio-catalysts

                                                                                "Human gastric lipase. The N-terminal tetrapeptide is essential for lipid binding and lipase activity.";

Eur. J. Blochem. 182:495-499(1989).

-!- CATALYTIC ACTIVITY: Triacylglycerol + H(2)O - diacylglycerol + & fatty acid anion.

-!- SIMILARITY: PARTIAL WITH OTHER LIPASES (PANCEFATIC, GASTRIC, HEPATIC, LINGUAL, LIPOPROTEIN, BACTERIAL, ETC.).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TRIACYLGLYCEROL LIPASE, GASTRIC.

-!- CATALYTIC ACTIVITY: Acetyl-CoA + dihydrolipoamide = CoA + S-
excetylalidydrolipoamide.
-!- COFACTOR: THE E2 COMPONENT CONTAINS ONE COVALENTLY-BOUND LIPOYL
COFACTOR (PROBABLE).
-!- PATHWAY: ACETOIN CATABOLISM.
-!- INDUCTION: BY GROWTH ON ACETOIN.
-!- SIMILARITY: CONTAINS 1 LIPOYL-BINDING DOMAIN.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description
